[Crash Query Tool | Vermont Agency of Transportation](#) - This is the online AOT tool to see crash data, I was not able to narrow down the list of data to just the intersection, But I was able to zoom in on the map. Short version over the last 10 years there was one reported bicycle involved crash and one other crash with injuries. All other crashes only involved motor vehicles.

I've also attached the speed cart data from the area in two forms one that looks at the speed of traffic and the second that looks at time of day when vehicles are traveling through the area.

It should be noted that the speed cart only records data from vehicles traveling in one direction at a time. Some assumptions that can be made is that approximately the same number of vehicles are using the roadway in each direction, so the total number of vehicles using the roadway is double that of the number recorded by the speed cart.

Example, on the Huntington Rd data, 15033 cars were recorded over 8 days or approximately 1879 vehicles per day were recorded. The total numbers of vehicles using the roadway would be double this or approximately 3750 vehicles.
