How to read your results

This test report shows the final result, threshold, and interpretation for each analyte.

The **Final Result** is how much of a contaminant is in your drinking water.

The **Threshold** is the maximum amount of a contaminant that is accepted for drinking water based on federal or state guidelines.

The **Interpretation** lets you know if your result is over the threshold. A blank space means your sample was below the threshold.

Some results show less than or greater than symbols.

The < means "less than," <0.10 would be "less than 0.10". If you receive a "less than" result, there is nothing to report for that analyte.

The > means "greater than," >300 would be "greater than 300".
